More ways to communicate. One compact T5.

A magnetic translator accessory for a compatible smartphone and the AIGSM app.

Move between face-to-face conversations, translated messages, meeting notes and multilingual calls.

Product appearance illustration

Current AIGSM functions are free to use.

No subscription, paid minutes or usage quotas. Internet/data charges may apply.

01

Talk across languages

Use conversation translation and review source and translated text on your phone.

02

Connect remotely

Create an AIGSM voice or video room with spoken translation and translated text in both directions.

03

Keep useful notes

Record and transcribe meetings, organise AI notes and mind maps, then export Word, PDF or TXT.

For phone-accessory retailers, wholesalers and customers who prefer translation tools alongside their smartphone.

A compatible phone and AIGSM are required. Online rooms, AI notes and mind maps need internet access. Phone not included.

Start with your phone.

Actual attachment demonstration

01 Attach and pair

Check magnetic fit with your phone or case. Pair T5 with your compatible phone and open AIGSM.

02 Choose your languages

Open conversation mode and select the language pair you want to use.

03 Speak and review

Hold the T5 button while speaking, take turns and review the translated text in AIGSM.

Invite someone to a translated call.

01

Create

Start a voice or video call in AIGSM.

02

Share

Send the generated link to your guest.

03

Join

Guest opens the link in a browser and selects a receiving language.

04

Talk

Use spoken translation and on-screen translated text in both directions.

Your guest joins through the browser.

No separate app installation or second T5 is needed for the guest. These calls use an AIGSM link; they are not native WhatsApp, FaceTime, Zoom or Teams calls.

Useful beyond a conversation.

Speak a message. Review the translation. Send it yourself.

In supported chat input fields, speak in one language and place translated text into the message field. For example, French speech can become a Chinese text message. You remain in control of sending it.

Meeting workflow

Recording > Transcript > AI notes / mind map > Word, PDF or TXT

Does it work with iPhone and Android?

Both use AIGSM and offer the same core workflow. Use a compatible phone and check the intended phone, case and app version when evaluating a sample.

Can I use it offline?

Supported conversation translation can work offline after the required language models have been downloaded. Online calls and AI functions still require internet access.

Can users manage their recordings and translation records?

You can delete records in the app. With your authorisation, some online functions may process audio through third-party service providers, as described in AIGSM's privacy policy.

Is branding available?

Neutral evaluation samples are available. Bulk supply and device-logo branding start from 50 units. Packaging and other customisation details are agreed for the specific order.
