# Two screens.
# A shared conversation.

A folding translator with a screen facing each participant.
Use the device directly - no smartphone required.

Product appearance illustration

01

### Each person can read

Face-to-face conversation mode gives each participant a view of the translation on their side.

02

### Dedicated controls

Physical voice buttons correspond to the two selected languages. Screen controls are also available.

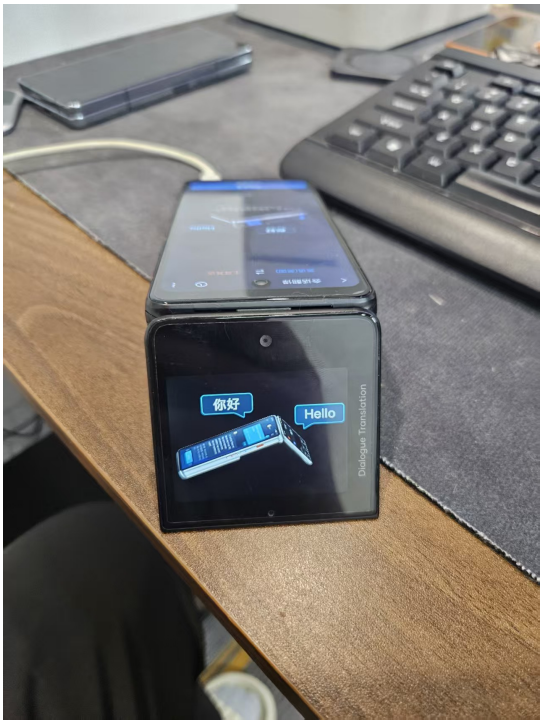
03

### Online & offline modes

Use online translation with internet access, or prepare supported language packs for offline mode.

**A practical format to evaluate at a retail counter, reception desk or one-to-one product discussion.**

# Open. Choose. Take turns.



Actual T90 device photograph

### 01 Open the two screens

Position the device so each participant can view their own side.

### 02 Select conversation mode

Choose the two languages for your exchange. Conversation mode and online translation are separate modules.

### 03 Use your voice control

Press and hold the button for your selected language, speak, then release to translate. Take turns and review the result.

## Choose the right mode.

ONLINE

### Connected translation

Online translation needs internet access. Set your own language; automatic recognition of the other speaker's language is available in online mode.

OFFLINE

### Prepare before travelling

Download the supported language packs in advance. Check the exact language pair and mode on your sample before relying on them for your trip.

### Arabic options for Gulf markets

Online Arabic includes 19 regional options, including all six GCC countries.

# Test it with your real conversations.

Use short exchanges that reflect how your customers will actually speak.

01

### At a counter

Try a product question, a quantity and a price.

02

### At reception

Try directions, an appointment time or a short request.

03

### At a trade meeting

Try a brief discussion about a sample or packaging.

### Does T90 need AIGSM or a smartphone?

T90 is a standalone device with its own screen controls. It does not use the T5 phone-and-AIGSM workflow. Online modes still need internet access.

### Are current software functions chargeable?

The functions currently provided on the supplied configuration are free to use. Internet or mobile-data charges are separate.

### Can we sell it under our own brand?

Evaluation samples are available. Bulk neutral supply or device-logo branding starts from 50 units. Packaging and startup-screen customisation can be discussed for your order.

### What should we check before a bulk order?

Evaluate the intended language pair, mode, controls and readability with your own sample phrases. Confirm the supplied configuration, package contents and required market documents with your quotation.

## Plan a product evaluation

Tell us your priority languages, intended use and target order quantity.
